QUARTER 1 – PROJECT PROPOSAL

I. Project Title

StudyTrack: A Simple Student Task Organizer

II. Problem Statement

Students usually have many school activities like assignments, projects, quizzes, and homework. Sometimes, it can be hard to remember all of them, especially when they have different deadlines. This can cause students to forget tasks or finish them late.

My project, **StudyTrack**, is a simple program that will help students keep track of their school tasks. Users can add their tasks, deadlines, subjects, and priority levels. The program will show the tasks in an organized list so students can easily see what they need to do.

III. Project Objectives

- To allow students to add their school tasks, including the task name, subject, deadline, and priority.
- To display all the saved tasks in an organized list.
- To help students identify which tasks are more important or need to be finished soon.

IV. Planned Features

- Add a new task
- Add the subject and deadline
- Choose a priority level: Low, Medium, or High
- View all saved tasks
- Mark a task as completed
- Remove a task
- Show high-priority and upcoming tasks

V. Planned Inputs and Outputs

Inputs:

- Task name
- Subject
- Deadline
- Priority level
- Task status

Outputs:

- List of school tasks
- Task deadlines
- Task priority
- Completed and unfinished tasks
- Message showing important or upcoming tasks

VI. Logic Plan – Pseudocode

START

Show the main menu.

WHILE the user has not selected Exit:

 Show the choices:

1. Add Task
2. View Tasks
3. Mark Task as Completed
4. Remove Task
5. Exit

 Ask the user to choose an option.

 IF the user chooses Add Task:

 Ask for the task name.
 Ask for the subject.
 Ask for the deadline.
 Ask for the priority.
 Save the task.
 Show "Task added successfully."

 ELSE IF the user chooses View Tasks:

 Show all saved tasks.

 ELSE IF the user chooses Mark Task as Completed:

 Show the tasks.
 Ask which task to mark as completed.
 Change the task status to Completed.

 ELSE IF the user chooses Remove Task:

 Show the tasks.
 Ask which task to remove.
 Remove the selected task.

 ELSE IF the user chooses Exit:

 Show "Thank you for using StudyTrack."
 END

 ELSE:

 Show "Invalid choice. Please try again."

END

Computational Thinking

This project uses computational thinking by breaking the problem into smaller parts. The program will have separate steps for adding, viewing, completing, and removing tasks. It will also use a step-by-step process

to decide what the program should do based on the user's choice.
